Summary

Cloud and **DevOps Engineer** (**Junior/Intermediate**) with hands-on experience in automating CI/CD pipelines using AWS, Terraform, and Kubernetes. Experience in supporting and implementing **Infrastructure as Code** (IaC) solutions to increase reliability and streamline provisioning. Proficient in Linux and Microsoft 365 (M365), with experience in automating IT operations through **Bash scripts**. Passionate about SRE, **observability** (**Prometheus**, **Grafana**, **ELK Stack**), and **DevSecOps**, with a focus on running and operating cloud environments.

Experience

DevOps Engineer — C Software & Solutions **Jan 2026 – Present**

- Implemented and managed CI/CD pipelines for intern projects, improving deployment efficiency and reliability.
- Collaborated with cross-functional teams to define best practices for deployment, monitoring, and observability.

Projects

Backend Infinite – Cloud-Native Monitoring Platform (DevOps/SRE Project)

- Containerized a Go backend application with Docker, ensuring consistency across environments.
- Deployed and managed the application on Kubernetes using manifests (Deployments and Services).
- Collected and stored service metrics with InfluxDB for HTTP, Ping, Port Scan, and SNMP monitoring.
- Developed internal pipelines for real-time metric processing and delivery.
- Built an observability system for performance and availability analysis.
- Configured real-time data streaming using Server-Sent Events (SSE).
- Modeled and integrated PostgreSQL database with focus on reliability and scalability.
- Automated workflows with Taskfile and organized the application with a modular architecture.

Tech: Docker, Kubernetes, InfluxDB, PostgreSQL, Go, Linux, RESTful, SSE.

Transcendence (42 Project) – DevOps, Observability & Microservices Architecture

- Implemented a full ELK observability stack (Elasticsearch, Logstash, Kibana) for log collection, transformation, and visualization.
- Configured log retention and archiving policies for compliance.
- Built a monitoring system with Prometheus and Grafana, including custom metrics and interactive dashboards.
- Set up automated alerts for proactive detection of failures and performance degradation.
- Implemented health checks, status pages, high-availability mechanisms, automated backups, and disaster recovery strategies.
- Applied security controls and authentication for access to Grafana, Kibana, and internal services.
- Implemented a Web Application Firewall (WAF) to protect against common attacks (OWASP Top 10).

Tech: Docker, ELK Stack, Prometheus, Grafana, Linux, Nginx, WAF.

Education

Bachelor of Telecommunications Engineering **Luanda, Angola**
Higher Institute of Information and Communication Technology *Feb 2021 – Present*

Master's Degree 42 School **Luanda, Angola**
42 Luanda *May 2024 – Present*

Complexo Escolar Missionário Santa Maria Goretti **Luanda, Angola**
High School Diploma in Mathematics and Physics *May 2017 – December 2020*

Skills

Cloud & Infrastructure: AWS, GCP, Linux, Nginx, Docker, Kubernetes (EKS), Terraform, Ansible, AWS CloudFormation.
DevOps: CI/CD, GitHub Actions, Prometheus, Grafana, AWS CloudWatch, ELK Stack, Git.
Security: IAM, Applied Cryptography (AES, RSA), Vault.
Programming Languages: Go, C/C++, Python, Bash (Linux Shell Scripting).
Other skills: Algorithms and data structures, Object oriented programming, Initiative, Curious mindset.

Certifications

- **Google Agile Project Management — Coursera**
- **Agile with Atlassian Jira - Coursera**
- **Introduction to Cyber Security — Coursera**
- **Information Systems Auditing, Controls and Assurance — Coursera**
