Summary

Cloud and **DevOps Engineer Junior** with hands-on experience in automating CI/CD pipelines using AWS, Terraform, and Kubernetes. Experience in supporting and implementing **Infrastructure as Code** (IaC) solutions to increase reliability and streamline provisioning. Proficient in Linux and Microsoft 365 (M365), with experience in automating IT operations through **Bash scripts**. Passionate about SRE, **observability** (**Prometheus**, **Grafana**, **ELK Stack**), and **DevSecOps**, with a focus on running and operating cloud environments.

Experience

DevOps Engineer — C Software & Solutions **Jan 2026 – Present**

- reduced manual deployment steps by implementing CI/CD pipelines using GitHub Actions for internal projects.
- Collaborated with cross-functional teams to define best practices for deployment, monitoring, and observability.

Projects

Backend Infinite – Cloud-Native Monitoring Platform (DevOps/SRE Project)

- Designed and deployed a containerized Go backend on Kubernetes for monitoring distributed services.
- Implemented full observability stack using InfluxDB, Prometheus and Grafana for real-time metrics visualization.
- Built logging and analytics pipeline with PostgreSQL and streaming via Server-Sent Events (SSE).
- Automated deployments and workflows using Docker and Taskfile.

Tech: Docker, Kubernetes, InfluxDB, PostgreSQL, Go, Linux, RESTful, SSE.

Transcendence (42 Project) – DevOps, Observability & Microservices Architecture

- Implemented a full ELK observability stack (Elasticsearch, Logstash, Kibana) for log collection, transformation, and visualization.
- Configured log retention and archiving policies for compliance.
- Built a monitoring system with Prometheus and Grafana, including custom metrics and interactive dashboards.
- Set up automated alerts for proactive detection of failures and performance degradation.
- Implemented health checks, status pages, high-availability mechanisms, automated backups, and disaster recovery strategies.
- Applied security controls and authentication for access to Grafana, Kibana, and internal services.
- Implemented a Web Application Firewall (WAF) to protect against common attacks (OWASP Top 10).

Tech: Docker, ELK Stack, Prometheus, Grafana, Linux, Nginx, WAF.

Education

Master's Degree 42 School **Luanda, Angola**
42 Luanda *May 2024 – Present*

Bachelor of Telecommunications Engineering **Luanda, Angola**
Higher Institute of Information and Communication Technology *Feb 2021 – Present*

Complexo Escolar Missionário Santa Maria Goretti **Luanda, Angola**
High School Diploma in Mathematics and Physics *May 2017 – December 2020*

Skills

Cloud & Infrastructure: AWS, GCP, Kubernetes, Docker, Terraform.
DevOps & Automation: CI/CD, GitHub Actions, Ansible.
Observability: Prometheus, Grafana, ELK Stack
Security: IAM, Vault, basic cryptography.
Programming Languages: Go, Python, Bash, C/C++.
Other skills: Algorithms and data structures, Object oriented programming, Initiative, Curious mindset.

Certifications

- **Google Agile Project Management — Coursera**
- **Agile with Atlassian Jira - Coursera**
- **Introduction to Cyber Security — Coursera**
- **Information Systems Auditing, Controls and Assurance — Coursera**
